Where Power Meets Presence

Performance, design, and comfort come together effortlessly in the SKIPPER 42NC, the flagship of the range. With its strong, clean lines and well-balanced proportions, it stands out both underway and at anchor.

Built around advanced hull technology, it delivers a smooth, stable, and confident ride, even when conditions become demanding. It's a boat that feels solid and responsive, offering a true sense of control at speed. On deck, the layout is open and inviting, with generous spaces for relaxing and socializing, finished with a modern, refined touch.

Inside the console, you'll find a comfortable double bed, a separate WC with sink and shower, and plenty of storage, a practical and well-designed space that shows performance and comfort can naturally go together.

Every detail reflects the SKIPPER philosophy: thoughtful design, strong performance, and a complete boating experience.

AEROQUAD™

4 Step Technology

4 Step Technology represents a revolutionary leap in hull design for SKIPPER POWERBOATS, integrating the industry's only 4-Step Hull – a groundbreaking feature that optimizes hydrodynamic lift, stability, and control.

Developed through rigorous testing, both in scaled-down models and full-size prototypes, 4 Step Technology harnesses computational fluid dynamics (CFD) and cutting-edge algorithms to fine-tune every element of the hull's profile.

Central to 4 Step Technology is the precise calibration of the four steps, strategically positioned to minimize drag and maximize lift, while the strake geometry and variable deadrise distribution further enhance stability and handling. The result is a hull that delivers exhilarating acceleration, superior control, and a remarkably dry ride even in challenging offshore conditions.

INFINITYDECK™

A NEW STANDARD IN SPACE & ERGONOMICS

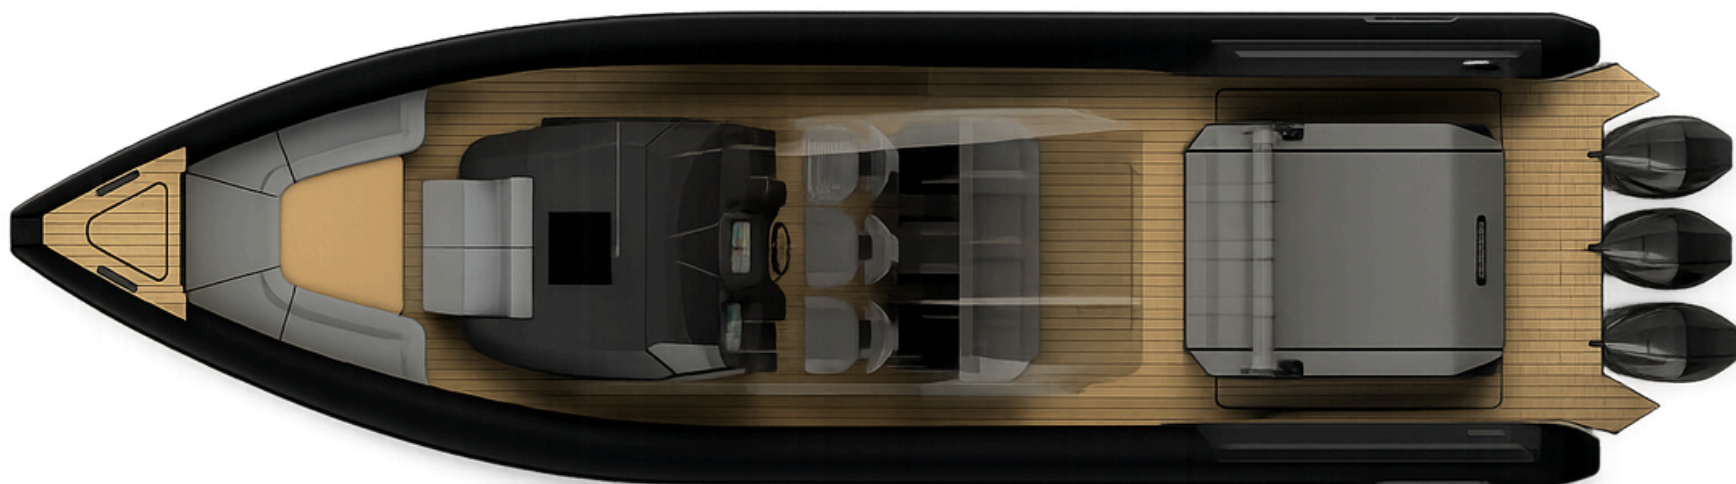

A defining feature of the SKIPPER 42NC is its revolutionary deck concept, introduced as the SKIPPER INFINITYDECK™.

Unlike conventional layouts that narrow toward the bow, the INFINITYDECK™ maintains a consistent beam distribution from aft to forward, creating a truly open and uninterrupted deck space.

This configuration delivers:

- A significantly expanded usable deck area
- Wide and safe walk-around access
- Effortless movement throughout the boat
- Enhanced social and relaxation spaces

The result is a deck that feels exceptionally open and functional, offering a level of onboard space and comfort usually found in much larger vessels.

TECHNICAL SPECIFICATIONS

Max Power	4x 500HP
Length Over All (LOA)	12.40m
Beam (inflated)	3.60m
Weight (Lightship)	6200kg
Fuel capacity	880lt up to 1000lt
Water capacity	170lt
Hull Design	Aeroquad 4 Step Technology
Deadrise angle	24°
Max Persons	12
Design Category	B
